

Activity 39: Import and export templates

Who should complete this activity

- Prepress operators
- System administrators

Why you should complete this activity

Knowing how to import and export templates will enable you to back up and maintain templates without stopping Prinergy Evo.

The import and export functions you will learn about in this activity do not offer as comprehensive a backup solution as the Save/Restore Configuration procedure, but they help to ensure that comparable Evo systems may perform the same operations.

Support personnel may require process and workflow templates to reproduce or duplicate operating conditions. Understanding how to export process templates while Prinergy Evo is running could expedite support assistance.
