

Viewing attributes

You can view the attributes of a project, a library, an element, a folder, a task, and a task element. When you view the attributes of a project, a library, a folder, a task, or a task element, you only see the User Defined attributes. When you view the attributes of an element, you see the User Defined, System, and XMP Metadata attributes.

Note: Depending on the user right, you may see **Edit** in the inspector view instead of **View All**.

1. To view User Defined attributes, perform one of the following actions:

To	Do this
View project attributes	a. Select a project. b. Select Project > View Project Attributes or click View All in the inspector view
View library attributes	a. Select a library. b. Select Library > View Library Attributes or click View All in the inspector view
View element attributes	a. Select an element. b. Select Element > View Element Attributes or click View All in the inspector view
View folder attributes	a. Select a folder. b. Select Folder > View Folder Attributes or click View All in the inspector view
View task attributes	a. Select a task. b. Select Task > View Task Attributes or click View All in the inspector view
View task element attributes	a. Select a task element. b. Select Task Element > View Task Element Attributes or click View All in the inspector view

2. To view System attributes and XMP attribute metadata:
 - a. Select an element.
 - b. Select **Element** > **View Element Attributes** or click **View All** in the inspector view.
 - c. In the Attributes window, click **System** or **XMP Metadata**.

Note: When an element has multiple revisions, you can view the attributes of each element's revision.
