

Selecting Prinerger Workflow floating licenses

When a FLIM license containing Pandora 4.x licenses is upgraded to a version that supports Pandora 11.x (for example, Prinerger Workflow 11.0), it automatically receives the same number of Pandora 11.x licenses.

Pandora supports floating licenses when integrated with:

- Kodak Prinerger Workflow software 11.x or later

1. Select **Help > Licensing**.

2. In the Licensing dialog box, select **Prinerger Floating License**.

3. In the **License Server** list, select the Prinerger Workflow server from which you want to obtain a license.

You can search for a specific server by typing the server name in the **License Server** box. If you can't find a license server by typing the server name, type the server IP address or contact your network support representative to ensure Domain Name Search (DNS) domains are set correctly on your network.

4. The number of licenses that are available appears in the list of licenses.

- a. If no licenses are available on this server, click **Details** to determine who is currently using the licenses.

- b. To return to the Licensing dialog box, click **OK**.

Tip: If the **License Server** box is empty, and you are using Windows, ensure that Windows Firewall is not blocking connections to Pandora by adding Pandora to the list of exceptions (**Start > Settings > Control Panel > Windows Firewall > Exceptions**).

5. Select a license, and click **OK**.
