

Resizing objects

You can change the size of an object (artwork or mark) by typing the required dimensions or by scaling it.

Note: You can scale artwork and marks, but not dies.

1. If the **Geometry** palette is not currently shown, select **Window > Show Geometry Palette**.
2. Click the object to select it.
3. On the **Geometry** palette, type the width and height you want to apply to the object in the **W** and **H** boxes.

Tip: After the current width or height figure, you can type the amount you want to add or subtract from that dimension, and the software will calculate the result.

Note: Be sure to position the cursor after the number on the **Geometry** palette before you type the amount to add or subtract. If the number on the **Geometry** palette is highlighted and you type +1, +1 replaces the number instead of being added to it.

4. Press Enter.

Notice that the size change you apply is also reflected in the changed scaling percentages on the **Geometry** palette.
