

Creating a mark set

A mark set is a folder of marks that you can apply to jobs by dragging the folder from the **Marks** palette. SmartMarks included in the mark set retain their smart functionality and position themselves automatically. Simple marks land on the job in a stack and you drag each mark into place.

1. In Macintosh Finder or Windows Explorer, create and name a new folder for the mark set within the `Pandoraversion\Marks\User` folder.
2. In Macintosh Finder or Windows Explorer, copy and paste each mark that you want included in the mark set into the new folder.
3. On the **Marks** palette, click the option arrow, and select **Refresh**.
4. (Optional) For each SmartMark in the set that you need to edit, select the mark on the **Marks** palette, and select **Edit** from the options menu or the bottom of the **Marks** palette.
5. In the SmartMark Settings dialog box, edit the settings for each SmartMark as appropriate, and click **Save**.
