

Modifying crop mark settings

You can modify the crop marks by editing the `DefaultUser.properties` file.

1. Exit the Pandora software.

Note: You cannot update `DefaultUser.properties` if the software is running.

2. Using a text editing program, open the `DefaultUser.properties` file (in the Pandora *version* folder).
3. If you want to use a different PDF file, place your file in `Pandoraversion\Resources\BuiltInMarks`.
4. Type `Cropmark.PDFFile=<yourfilename>`. Type the name of the mark file you want to use; for example, `Cropmark.PDFFile=<yourfilename>.pdf`.
5. For the crop mark settings `Cropmark.OffsetX` and `Cropmark.OffsetY`, type the distance in points you want to offset the crop marks.
6. Save and close the file.
7. Start the Pandora software.
