

Logging tab

The screenshot shows a software window titled "Kodak" with three tabs: "General", "Options", and "Logging". The "Logging" tab is active. It contains the following settings:

- file name : CF2C
- Level : Info (dropdown menu)
- Format : .yyyy.MM
- Keep Old Preferences
- Log Pattern Try

At the bottom of the window, it says "Build Nr. : d2d99b" and has "OK" and "Cancel" buttons.

file name: Root of the file name. There is rarely a need to change this setting.

Level: Level of detail recorded in the log. Leave this setting at its default unless a Kodak support representative asks you to change it.

Format: Format of the log file name. For example, use:

- .YY.MM.dd for a new file each day
- .YY.MM for a new file each month (default)

Keep Old Preferences: Make a dated copy of the preferences before modifying them.

Log Pattern Try: For debugging only: try to find a repeated pattern in CF2 files. The setting for **Level** should be set to **Ludicrous**.
