

Creating a job and opening files

Creating a CAD Correct job

Creating a CAD Correct job opens a new instance of the CAD Correct application window.

To create a new job:

- From the **File** menu, select **New**.

Opening files

You can open input files in CAD Correct by either dragging them into the **File** box of the main screen or by browsing through the folder system.

To open a file using drag:

- Drag the file into the **File** box.
The file opens in the **Preview** pane. If another file was already open, CAD Correct discards it.

To browse to open a file:

1. From the **File** menu, select **Open**.
2. Select the file.
3. Click **Open**.
The file opens in the **Preview** pane. If another file was already open, CAD Correct discards it.
