

# Creating CF2 files from Pandora layouts

**Note:** Pandora 8.4 support the ability for Pandora to write out a single CFF2 of the combined dies and/or artworks placed in the layout.

- Example 1: User places more than one CFF2 on a job. Pandora will create a single CFF2 containing all dies as a CFF2 format.
- Example 2: User will use SmartLayout tool to gang numerous CFF2 files together. Pandora will write out a single CFF2 of all dies as a CFF2 file format
- Example 3: User places numerous artworks that contain a die separation on a Pandora job without a die. Pandora will recognize "Die color" and write a CFF2 of these files.

This new feature is located under File > Print Die.

## **Prior to Pandora 8.4:**

- [Creating a CAD file from a Pandora Die Layout \(Prior to Pandora 8.4\)](#)
- [Creating a CAD file from a Pandora layout containing only Artwork \(Prior to Pandora 8.4\)](#)
