

# Controlling line width

You can control the width of the dieline that Pandora embeds into the file. When printing to PDF or PJTF, you need to select the **Die Outline Embed** check box in the Print dialog window. If you are using Pandora in integrated mode with Prinergy, it will automatically embed the dieline width that you set.

1. Exit the Pandora software.  
**Note:** You cannot update `DefaultUser.properties` if Pandora is running.
2. Using a text editing program, open the `DefaultUser.properties` file (in the `Pandora version` folder).
3. Type `Print.DieLineWidth=width`, where the width is a point size between 0 and 12 points.
4. Save and close the file.
5. Start the Pandora software.
