

Converting an EPS or PostScript file to PDF

The Pandora software accepts only PDF artwork and marks files. To use a PostScript file or an EPS file, select one of the following methods:

- Export a file as PDF from the software that you use to create the file.
- Save a file as PDF in the software that you use to create the file.
- Distill the PostScript or EPS file to PDF in Adobe Acrobat Distiller.

Important: When saving the artwork file as a PDF, refer to the information about input files in the [Kodak Prinergy Workflow Workshop User Guide](#).
