

Locale: Language and Units of measure

The default settings for units of measure are based on the locale of the language in which you installed the software.

1. Select **Edit > Preferences** (Windows) or **Pandora > Preferences** (Macintosh).
2. In **Preferences**, select the **General** tab.
3. In the **Language** box under **Locale**, select the language that you want to use.
Note: When you change to another language, you may need to change the **Units of measure**, **DXF default measure**, and **Bleed margins** units of measure.
4. In the **Units of measure** box, select the units that you want to use as the default.
5. In the **DXF default measure** box, select the units of measurement that you typically use when creating DXF die files.
6. Click **OK**.
