

# Regional Versioning

To create a versioning job, you can layer the base and version 1-up artworks, provided the base and the version information are separate files. There are noted limitations: layers can only be overprinted and not trapped.

1. Select **Pandora > Preferences** (Macintosh) or **Edit > Preferences** (Windows).
2. Select the **General** tab.
3. Click **Versioning Job** in **Regional Versioning**.
4. Type the number of **Max Layers** that you require to create a versioning job.
5. Click **OK**.  
The new settings take effect immediately.
