

Replacing artwork in Prinergy and editing the step-and-repeat layout

If you use the Pandora software integrated with Prinergy Workflow, you may want to swap out existing artwork and change the existing step-and-repeat layout. For example, a layout that contained 20 labels for strawberry jam in a 5 x 4 step-and-repeat now needs to print as 15 labels for peach jam. Rather than creating a new job, you can reuse the existing layout by changing the step-and-repeat layout and replacing the artwork.

If you want to reuse the 20-label layout to print two different pieces of artwork (for example, five labels for strawberry jam and ten labels for peach jam), you must edit the step-and-repeat layout first in Pandora before replacing the artwork in Prinergy Workflow.

In this case, you can change:

- Distance/gap
- Position
- Stagger type and offset distance
- Layout centering

You *cannot* change:

- Wrap
- Number of placements (columns/rows)
