

Creating a simple step-and-repeat layout by dragging

When you have an overall idea of what is required in the production process and the layout is simple, you can select an artwork and drag it to create the necessary number of artworks on a layout.

1. Drag the artwork to the **layout** view.
2. Click the **StepRepeat** tool () in the toolbar.
3. Select the artwork and drag it to establish the number up that is required. If ASPS is enabled for step-and-repeat, it will auto-adjust the substrate accordingly.
4. If you need to edit the step-and-repeat after creation, right-click the layout and select **Edit**
