

Creating a two-sided layout

If the defined work style for the Pandora job is two-sided (either sheetwise or perfector), you can assign artwork to the back side of the layout. Until you do, Pandora adds a dummy step-and-repeat to the back side to show where artwork needs to be placed.

1. On the **job properties** pane, **Layout** tab, define the work style as two-sided (either **Sheet Wise** or **Perfector**).
2. On the current side, snap or manually align artwork to the die.
3. Select **Object > Flip Side** or press the **Flip Side** button  on the toolbar.
4. Select the die.
5. Snap or manually align the artwork to be used on the opposite side to the die.

Tip: On the **job properties** pane, **Layout** tab, use the transparency sliders for the current and opposite sides as needed to show back-up and alignment of the layouts.
