

Binding die station number marks to die stations using Apply to All

This procedure is useful when some (or all) of the stations in the die are alike.

1. To ungroup and unlock the die if necessary, select the die, and from the **Object** menu, select **Ungroup** and **Unlock**.
2. Select the first die station to which you want to apply the mark.
3. On the **Marks** palette, in the **Labels** folder, select one of the `LBL_Die Station Number` marks and drag it onto the selected die station.
4. Select **Object > Apply to All**.

The `LBL_Die Station Number` mark is now bound to all the die stations, and all the number marks are output with the same position relative to the die stations to which they are bound. If you move one of the bound marks, the other marks move to the same position on their own die stations. If you move the die, the bound marks move with the die.
