

Editing Pandora mark settings

You can modify the overprint state of Pandora marks that contain a single color.

1. On the **Marks** palette, select the mark.
2. Click the option arrow and select **Edit**.
3. In the **Attributes** area, select or clear the **Overprint** check box.
Note: You can only modify the overprint state of Pandora marks of a single color.
4. (Optional) Select the **AutoReverse separation** check box and set its background percentage threshold to a value that fits your individual needs.
For example, if the background is at least 50% or darker and this setting is on, the mark will automatically reverse out of the artwork separations that it is placed on.
5. Click **Save**.
